

**Nelson Wrap Dispenser, Co.**

***NWD***

**A complex problem with a simple solution**

**The Old Way: The Traditional Dispenser**

Requires the operator to bend over

Requires the operator to walk backwards

Puts a strain on the operator's back

Puts the operator in awkward and unnatural positions

Operator is in less control of his working environment

Over-under method requires two operators and is very dangerous

Inadequate tension control

Stretching is not more than 10 - 15%

Loads are not properly wrapped increasing damage

**The New Way : The Nelson Wrap Dispenser**

Bending over is not necessary

Operator walks forward with ease

No strain on the operator's back

No unnatural positions required

Operator is in total control of his environment

Safety first. Only one operator needed

More tension control plus a brake at your fingertips that stops the dispenser for the tightest wrap needed

Stretching is almost double for %

Loads are properly wrapped to secure freight from damage

**If you want flexibility, versatility, and total control of your working environment; then we have the solution for you.**
